Isolated and purified cysteine rich protein 61, Cyr61 - useful to modulate e.g. haematostasis, induce wound healing, promote organ regeneration etc.

Claim 2; Page 112-113; 133pp; English.

This protein sequence comprises human cysteine rich protein 61 (Cyr61), an extracellular matrix signalling molecule. Its amino acid sequence was deduced from a human placental cDNA clone (see AAT94699). Cyr61 polypeptides can be expressed in transformed or transfected host cells. Cyr61 can be used to modulate heamatostasis, induce wound healing in a tissue, promote organ regeneration, improve tissue grafting or promote for a modulator of angiogenesis, chondrogenesis, oncogenesis, cell adhesion, cell migration, cell proliferation, expand a population of undifferentiated haematopoietic stem cells in culture and to screen for a

```
The invention relates to extracellular matrix (ECM) signalling molecules involved in cellular response to growth factors. More particularly the involved in cellular response to growth factors. More particularly the involution is directed to cysteine-rich protein (Cyrél), and Cyrél-related proteins such as fibroblast secreted protein (Fispl2) and connective tissue growth factor (CTGF) and nucleic acid molecules encoding such proteins. The polypeptides of the invention are members of cysteine-rich secreted protein family. Human Cyrél fragment is useful in methods for screening modulators of cell adhesion, cell migration, fibroblast cell prolateration, angiogenesis, wound healing and Cyrél-integrin receptor interaction. Modulator of Cyrél-integrin alphaVbeta3 interaction is used for the preparation of a medicament for the treatment of atherosclerosis, heart disease, tumour metastasis, fibrosis, tumour growth, disorders associated with inadequate angiogenesis; aberrant granulation tissue development; aberrant fibroblast growth and wounds. Polymucleotides of the invention are useful in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NEDCSKTQPCDHTKGLECNFGASSTALKGICRAQSEGRPCEYNSRIYQNGESFQPNCQHQ 120

ö The present sequence represents a monocyte mature differentiation factor (MMDF) which maintains the life of macrophages for long periods in liquid culture. MMDF can be used as an anti-cancer agent, an immune activator and to treat infectious diseases 120 120 9 1 MSSRIARALALVVTLLHLTRLALSTCPAACHCPLEAPKCAPGVGLVRDGCGCCKVCAKQL 61 NEDCSKTQPCDHTKGLECNFGASSTALKGICRAQSEGRPCEYNSRIYQNGESFQPNCKHQ 1 MSSRIARALALVVTLLHLTRLALSTCPAACHCPLEAPKCAPGVGLVRDGCGCCKVCAKQL NEDCSKTOPCDHTKGLECNFGASSTALKGICRAQSEGRPCEYNSRIYQNGESFOPNCQHQ Gaps Human; monocyte; mature; differentiation factor; MMDF; macrophage; cancer; immune activator; tissue culture; infectious disease. - useful for the long . 0 Length 381; Indels Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 NEDCSKTOPCDHTKGLECNFGASSTALKGICRAOSEGRPCEYNSRIYONGESFOPNCKHO 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method of inhibiting proliferation of uterine leiomyoma or preventing uterine leiomyoma formation. The method comprises increasing the level of Cyr61 in leiomyoma tissue. The invention also describes compounds and compositions that stimulate induction of the Cyr61 gene and compounds that increase Cyr61 activity. The compositions and the method of the invention are useful for preventing uterine leiomyoma formation or inhibiting proliferation of uterine leiomyoma termine leiomyoma in a subject. The method is particularly useful for treating or preventing uterine leiomyoma in a subject. The present sequence represents human Cyr61. Note: The present sequence represents human Cyr61. Note: The present sequence sequence order in the figure. The start of the sequence is shown on page 8/10 of the figures and the rest of the

The present invention describes a method for the prevention or inhibition of breast cancer cell proliferation. The method comprises administration of breast cancer cell proliferation. The method comprises administration of a compound that inhibits the interaction of a sex steroid receptor with a sex steroid response element of the Cyfel (cysteine rich heparinbinding protein) promoter. Cyfel has cytostatic activity. An antibody (I) which neutralises Cyfel can be used to prevent or inhibit breast cancer cell proliferation by blocking sex steroid induced and growth factor in equivalently in the cancer cell proliferation by blocking sex steroid induced and growth factor is epidermal, consent begin by a stage breast cancer where the level of Cyfel in a possitive/suspect breast cancer where the level in ormal costive/suspect breast cancer cell is compared to the level in normal tissue indicates the presence of breast cancer. The level of Cyfel being determined by exposing the tissues to (I), and an increase in the level coff breast cancer. The level of cyfel being the tissue indicates the presence of breast cancer. The present sequence represents the human Cyfel protein, which is used in the exemplification coff the present invention
                                                                                                                                                                                                                                    Regulation of Cyr61 expression and activity for preventing and inhibiting breast cancer comprises use of a Cyr61 neutralizing antibody, an antisense oligonucleotide and an antibody which.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 2106; DB 5;

```
The present invention relates to a method for stimulating angiogenesis in a mammal. The method comprises administering a polynucleotide encoding connective tissue growth factor-2 (CTGP-2) or an active fragment or its derivative. The method is useful for stimulating angiogenesis in a mammal preferably human having ischaemia or restenosis or is treated for limb revascularisation which is leg or arm. The invention is useful for inhibiting tumour growth, where angiogenesis is utilised for enhancing the repair of connective and support tissue, promoting the attachment, fixation and stabilisation of tissue implants and enhancing wound healing, hence is useful for treating cardiovascular disease e.g. atherosclerosis, reperfusion injury such as heart failure, angina, atherosclerosis, reperfusion injury such as heart failure, angina, schlaremais, and is also used to differentiate, proliferate and attract cells leading to regeneration of itssues which is utilised to repair replace or protect tissue damaged by congenital defects, trauma (burns, ulce, etc.), age, disease (e.g. osteoprorsis, periodontal disease, liver failure), surgery including cosmetic plastic surgery. The present sequence is human CTGF-2. CTGF-2 gene is useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NEDCSKTOPCDHTKGLECNFGASSTALKGICRAQSEGRPCEYNSRIYONGESFOPNCOHO 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTCIDGAVGCIPICPQELSLPNLGCPNPRLVKVTGQCCEEWVCDEDSIKDPMEDQDGLLG 180

The CTGF-2 polypeptide is useful for enhancing the repair of connective and support tissues, for treating skin disorders such as injuries, acne, IV danage or burns, and wrinkled skin, for promoting attachment, fixation and stabilisation of tissue implants, and as an immunogen to produce antibodies. The polyuncleotide sequence encoding CTGF-2 may be used as a hybridisation probe for a cDNA library to isolate the full-length cDNA and other cDNAs, which have high sequence similarity to the CTGF-2 gene or similar biological activity. The polynucleotides are also useful for identification. The present sequence represents human CTGF-2. Note: The present sequence represents human CTGF-2. Note: The present sequence in Fig 1 (ABU63223)

artidiabetic, antiasthmatic; antiarthritic; antidiabetic, antiasthmatic; antidiabetic, antidiabetic, antidiabetic, antidiabetic; antidiabetic; antidiametory; antidiametory; antipicity in the antidiametory; antipicity is antidiametory; antipicity is coagulant; nootropic; vasotropic; antiporatic and antidiagloganic. The polymucleotides and polypeptides can be used for preventing, treating or members of properting or antibodies, applying pathological conditions. Polymucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune cells, to treat disorders of haematopoietic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and cancers activity infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            KTCGTGISTRVINDNPECRLVKETRICEVRPCGQPVYSSLKKGKKCSKTKKSPEPVRFTY 374

The invention discloses the isolated human polypeptides, and polymerides encoding them, that have been designated SECX and NOVX. The polymerides can be used for treating, or delaying, the onset of an angiogenic-associated disorder or treating a pathological state in a sugiogenic-associated disorder or treating a pathological state in a sugiogenic-associated disorder or treating a pathological state in a subject, preferably a mammal. They can also be used in determining the presence of, or predisposition to, a disease associated with altered levels of the polypeptides and polymerlectides of any one of the 12 sequences (SEC1-12), for raising antibodies, for identifying an agent that modulates the expression or activity of the polypeptide, for treating or preventing a NOVX-associated disorder (NOVI-8) and as a pharmaceutical composition comprising the polypeptide, polypeptide or the mathiacody. The polypetides and polymerlectides are useful in diagnostic applications where their amounts are assessed, or preventing disorders or syndromes such as developmental disorders, immune diseases, signal transduction pathway disorders, metabolic disorders, neurodegenerative disorders (including Alzheimer's disease and parkinson's disease, cirrhosis (including Alzheimer's disease and parkinson's disease, cirrhosis dispetes, infectious disease (bacterial, fungal, procozoal and viral e.g. human immunodeficiency virus, HIV), cancer (e.g. prostate cancer), hypertension, hypotension, multiple cancers (e.g. arxiely), haemophilia or cirrhosis. They may neurological disorders (e.g. arxiely), haemophilia or cirrhosis. They may have be used as immunogene to produce antibodise specific for the invention and as immunogene to produce antibodise specific for the invention and as immunogene to produce antibodise specific for the invention and as immunogene to produce antibodise specific for the invention and as immunogene to produce antibodise specific for the invention and as immunogene to produce antibodise and contention of the produce an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human SECX/NOVX polypeptide useful for diagnosing, preventing or treating disorders associated with aberrant expression or activity of SECX/NOVX nucleic acids and proteins e.g., diabetes.

                                                                                                                                                                                                                                                                                                                                                                                      9
patient sample and the normal level of expression of the marker in a control non-prostate cancer sample, where a significant increases in the level of expression of the marker in the patient sample and the normal level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequence given in ABB75177-ADB75631 represent marker cDNA and proteins. Note: The sequence was obtained in electronic format directly from WIPO at fit, pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           NEDCSKTQPCDHTKGLECNFGASSTALKGICRAQSEGRPCEYNSRIYQNGESFQPNCKHQ

                                                                                                                 The present invention describes human small CCN-like growth factor (SCGF). SCGF has vulnerary and osteopathic activities, and can be used in gene therapy. The SCGF polypeptides and polynucleotides can be used for treating muscle wasting diseases, and osteoporosis, and to stimulate wound healing and tissue regeneration, to promote angiogenesis and to stimulate proliferation of vascular, smooth muscle and endothelial cell production. The present sequence represents a CNN family protein which is given in comparison with the human SCGF in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Connective tissue growth factor-2 (CTGF-2) is encoded by a cDNA (AAT12653) isolated from a human foetal lung cDNA library. The GTGF groypeptides are structurally and functionally related to a family of growth factors which include IGF (Insulin-like growth factor), PDGF (platelet-derived growth factor), and FGF (fibroblast growth factor). CTGF-2 exhibits 89 percent identity and 33 percent similarity to Cry61. Cry61 is a growth factor-inducible immediate early gene initially identified in serum-stimulated mouse fibroblasts. It encodes a member of an emerging family of secreted proteins which are also a group of cysteine-rich proteins. This group of GFS are important for normal growth, differentiation, morphogenesis of the cartiladinous skeleton of an embryo and cell growth. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                301 YAGCLSVKKYRPKYCGSCVDGRCCTPQLTRTVKMRFPCEDGETFSKNVMIQSSKCNYNC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents human connective tissue growth factor-2 (CTGF-2). CTGF-2 cDNA was isolated from a cDNA library derived from human foetal lung. In one instance, the cDNA was cloned into a baculovirus primers AAZ11721 and AAZ11722. In another instance, the cDNA was cloned into a cOS cell expression vector, with prior amplified via PCR using primers AAZ11721 and AAZ11723 and AAZ11724. CTGF-2 is structurally and functionally related to a family of growth factors which circled IGF (insulin-like growth factor). PDGF (platelet-derived growth factor) and FGF (insulin-like growth factor). This emerging family of systeme-rich secreted proteins are important for normal growth. Cfactor) and FGF (insulin-like growth factor). This emerging family of systeme-rich secreted proteins are important for normal growth. Cfactor) and FGF (insulin-like growth factor). This emerging family of cysteme-rich secreted proteins also include wound healing, tissue repair, implant fixation and stimulating increased bone mass. CTGF-2 may be used to promote the attachment, fixation and stabilization of tissue implants inserted during reconstructive surgery, and can be used to promote the attachment, fixation and stabilization of tissue implants inserted during reconstructive surgery, and can be treatment of injured or depleted bone as it promotes the growth of connective tissue, bone and cementum and stimulates protein and collagen
                                                                                                                      Connective tissue growth factor-2; CTGF-2; wound healing; bone disorder; skin disorder; acne; burn; UV damage; stabilisation; tissue implant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotides encoding growth factor polypeptides useful for enhancing the repair of connective tissue and support tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 2; Length 375;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 1971.5; DB 2;

a mammal. The method comprises administering a polynucleotide encoding connective tissue growth factor-2 (CTGP-2) or an active fragment or its derivative. The method is useful for stimulating angiogenesis in a mammal preferably human having ischaemia or restenosis or is treated for limb revascularisation which is 19 or arm. The invention is useful for inhibiting tumour growth, where angiogenesis is utilised for enhancing the repair of connective and support tissue, promoting the attachment, fixation and stabilisation of tissue implants and enhancing wound healing, hence is useful for treating cardiovascular disease e.g. atherosclerosis, reperfusion injury such as heart failure, angina, ischeroscie, reperfusion injury such as heart failure, angina, caplace or protect tissue damaged by congenital defects, trauma (burns, cells leading to regeneration of tissues which is utilised to repair replace or protect tissue damaged by congenital defects, trauma (burns, ulcer, etc), age, disease (e.g. osteoporosis, periodontal disease, liver failure), surgery including cosmetic plastic surgery. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 CTCIGWRRGACIPLCPQELSLPNLGCPNPRLVKVTGQCCEEWVCDEDSIKDPMEDQDGLL 180

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                     US-09-495-448A-4

Application US/08459101A

Patent No. 5945300

GENERAL INFORMATION:

APPLICANT: LI, ET AL.

TITLE OF INVENTION: Connective Tissue Growth Factor-2

NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSE: CARELLA, BYRNE, BAIN, GILFILLAN,

ADDRESSE: CRECHI, STEWART & OLSTEIN

STREET: 6 BECKER FARM ROAD

CITY: ROSELAND

STATE: NEW JERSEY

COUNTRY: USB JE
Best Local Similarity 95.7%; Pred. No. 3.3e-164;
Matches 358; Conservative 2; Mismatches 13; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      COMPUTER READABLE FORM:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 43, A
